## **A study on Taxation Awareness Amongst MBA student's v/s other Core Professional courses students**

**Dr. Natika Poddar**

Associate Professor –St. Francis Institute of Management and Research

**Abstract:** *The paper is an attempt of an exploratory research carried out by the researcher to understand the taxation awareness in India amongst the MBA students with special reference to Mumbai city. MBA graduates enter into the business world in the management cadre where they are expected to take a lot of business decisions which have financial implications. When the decisions are in Indian context, taxation structure in India is an integral part of it. Sound knowledge about the Country's taxation policy helps in decision making. Keeping the objective in mind to understand the current level of awareness and some measure to improve it the research is carried out.*

*Keywords: Specific Taxation, GST, Central Excise, VAT .*

**Acknowledgement:** **I am grateful to our Director Dr.S.S.Mohanty, (SFIMAR) for critical review of paper and for the suggestions which he has made for improving quality of this paper**

### **Introduction**

Business decisions involves various financial decisions. Taxation is the most important areas which affect the profitability of the business when it comes to returns on investments. Normally, for those who study finance as specialization, it is covered in their curricula but the students have less about the taxation policy of India especially MBA students when it's compared with other Core Professional courses. Every Individual of the country earning income in India is liable to pay Income Tax after the basic exemption limit is crossed. Similarly, every consumer of produce or service covered under respective tax laws is indirectly paying the tax on it.

The MBA graduates – who are the business policymakers down the line – must have adequate knowledge of taxation as their decisions not only affect their business but also the society at large. The direct taxes may affect income earners only but the indirect taxes are influencing the life of every common citizen of the country. In this context, first understanding the present knowledge level and suggesting the measures for the enhancing it are attempted in this research. Professional institutes like CA, Cost Accountant need to take active part in this social awareness program which will help the profession and also the country as a whole. Chartered Accountants play active role in the field of direct taxation whereas Cost Accountants are always instrumental in indirect tax field and considered as experts in these taxes which form the major part of the economy of the country.

### **Objective of the study:**

- To understand the awareness level of MBA students about Indian Taxation system as future business managers and decision makers.
- To identify the gap between the expected level of understanding and the actual gauged through the response collected.
- To suggest the remedial measures to bridge the gap, if any

### Review of Literature:

- *Rafi Mohammed (2009)*, The study reveals that Understanding of taxes is not a luxury but a necessity of any business decision makers. The experts and tax consultants are always available but a business decision maker needs to understand whom to approach and at what time with his tax- problem. The study reveals the necessity of awareness about taxation policy of a country.
- There are two types of users of taxes—one who pay taxes i.e. citizens, and one who guide for taxes, i.e. tax professionals as studied by (*Govindan, N.S., 2008*). Both the set of people need tax awareness at different levels as revealed by (*Vaitheeswaran, K., 2008*), Professionals follow the stringent guidelines of the taxes (*Jain, R. K. 2007*), whereas the fundamentals are adhered to (*Raghuraman V. & Hiregange., 2007*), Managers are required to take decisions—that is not the time to go back to books (*Kohli, D. N., 2007*); in this scenario the fundamentals of taxes do play significant role (*Sarang, G., 2007*).

**Research Methodology:** The research is conducted based on Exploratory study and data collection is done through the questionnaire distributed to students of MBA Finance students, ICWAI ,CA Students Thus the sample consists of all the students who have studied Finance Assuming the same level of understanding, no gender specific information is collected so as to infer about taxation awareness. The average age of the respondents is 20-30 years. Sample size is 200 respondents where 100 respondents comprising of MBA Finance students, 100 comprising of CA and ICWAI students. . Data analysis is done with the help of descriptive statistics such as mean, frequency etc. Chi Square statistical tool would be applied to approve hypothesis testing.

### Hypothesis of the Study:

H0: MBA finance students and other core professional students possess equal awareness about taxation aspects.

H1: MBA Finance students possess less awareness about taxation aspects.

**Chi Square statistical tool would be applied to prove hypothesis testing.**

### Findings of the study, Data Analysis and Interpretation

The geographical boundary of the study is restricted to Mumbai city. The questionnaire was circulated amongst all 200 students. 200 amongst the collected in were chosen randomly based on which the data analysis and interpretation was carried out.

A questionnaire consisting basic level question on taxation was prepared and circulated amongst the students. The questions were covering the direct and indirect taxes such as Income Tax, Excise Duty, VAT, Service Tax, and Customs Duty. Considering the attributes of the sample of students the questions were more focusing on the present understanding, the willingness and attitude of students to gain knowledge about taxation and also to understand whether there respondents are aware of the sources of information which are available now about taxes in India.

The questionnaire for the purpose of analysis was divided in four levels. Considering the understanding level of questions it was expected that more than 85% of sample will respond

---

accurate answers.

**1. Basic Understanding / Awareness about Indian Taxation:**

1.1. What type of tax structure is followed in India? – Flat rate tax structure is Progressive tax structure.

72 percent of the respondents amongst other core professional course respondent it correctly whereas 68% amongst MBA finance students could answer it correctly. This indicates that reasonably educated students still need to know about the taxation structure of the company.

Based on the above value it signifies that there is no significant difference between the MBA finance students and other core professional’s course students in terms of attitude and willingness to learn about taxation Aspects.

**H0 is accepted.**

**4. This set of questions was looking for the awareness in terms of resources available to**

### **get knowledge about taxes.**

4.1. Question based on the name of the resources to obtain tax information.

General answers such as Internet or News etc were received. It has been observed that the MBA students were not aware of the government official sites where all authenticate information on taxes is available such as [www.cbec.gov.in](http://www.cbec.gov.in) [www.incometaxindia.gov.in](http://www.incometaxindia.gov.in) etc.

4.2. When asked about ways to improve knowledge some of the students suggested the inclusion of the subject in curriculum while some suggested that this topic should be made mandatory for MBA as a whole.

### **Findings of the study:**

- Basic awareness with respect to Taxation aspects is almost same amongst MBA students and other core professional course students.
- Specific awareness with respect to Taxation aspects is significant less amongst MBA students compared to other core professional course students.
- Willingness and attitude to learn about taxation aspects is significantly same amongst MBA students and other core professional course students.
- MBA students possess less knowledge about resources available to get information about taxation compared to other core professional students.

### **Suggestions and Remedial measures to bridge the Gap :**

To bridge the gap between what is expected and what exactly is known the training workshops are recommended. The structure of the workshop can be a two-day training with basic and intermediate level of knowledge. The specific objective of the workshop would be to create awareness about taxes amongst MBA students in business perspective.

### **Conclusions:**

The fundamental knowledge's of taxes is inevitable for any person staying in the country and contributing in the business world. The assistance from the experts or consultants can be sought at the later stage where one understands whom to approach and for what.

One of the questions in the questionnaire was to gauge the awareness amongst the students about forthcoming tax i.e. GST; very few MBA students were aware about it.

The Cost Accountant and Chartered Accountants have great role to play in this regime. Similarly, goods and Services Tax (GST) is approaching fast which is based on the principles of VAT and CENVAT of indirect taxes. All these are going to impact the business to a large extend. The professional institutes such as ICWAI, ICSI, ICAI can take the initiative with the help of the well spread chapter offices and offer the training modules in taxation for various management institutes in respective jurisdictions to offer the proposed programs. This will facilitate the growth of the profession and contribute towards growth of the country as well.
