

Challenges and Problems Faced By Women Workers in India

Mrs. SHUBHANGI SETHNA (RESEARCH SCHOLAR,HIMALYAN UNIVERSITY,AP)

DR.BALASAHEB S.GARJE (PROF.HIMALYAN UNIVERSITY,AP)

ABSTRACT

India is a traditional country and there is diversity in religions, culture and customs. Role of the women in India mostly is household and limited to domestic issues. In some cases women can find employment as nurses, doctors, teachers the caring and nurturing sectors. But even if well qualified women engineers or managers or geologists are available, preference will be given to a male of equal qualification. The present study investigated to identify the factors preventing women employees from aspiring for higher post and challenges & problems faced by women workers. Further the study try to explain the real condition of Indian working women and also make an effort to clear main problems of working women.

INTRODUCTION

In the history of human development, women have been as vital in the history making as men have been. In fact higher status for women vis-à-vis employment and work performed by them in a society is a significant indicator of a nation's overall progress. There are many reasons and problems that forced Indian's women to work. The financial demands on the Indian families are increasing day by day. Cost of living, expenses on education of children, and cost of housing properties in India raised and these reason force every family in India to look for ways and means of increasing the household income. As a result, women in India who were mostly known as homemakers are forced to go for jobs and take up even careers that were considered only suitable for men such as working in night shifts. Working women i.e., those who are in paid employment, face problems at the workplace just by virtue of their being women. Social attitude to the role of women lags much behind the law. The attitude which considers women fit for

certain jobs and not others, causes prejudice in those who recruit employees. Thus women find employment easily as nurses, doctors, teachers, secretaries or on the assembly line. Even when well qualified women are available, preference is given to a male candidate of equal qualifications. A gender bias creates an obstacle at the recruitment stage itself. When it comes to remuneration, though the law proclaims equality, it is not always practiced. The inbuilt conviction that women are incapable of handling arduous jobs and are less efficient than men influences the payment of unequal salaries and wages for the same job. But in most families her salary is handed over to the father, husband or in-laws. So the basic motive for seeking employment in order to gain economic independence is nullified in many women's case. Problems of gender bias beset women in the industrial sector when technological advancement results in retrenchment of employees. Women workers in India are faced with lot more challenges than their counterparts in the other countries. Besides of so many efforts from past years, female section of society is deprived in compared to male section. They are not given first priority in social and economic decisions in her own family. According to United Nations Development Programmer (UNDP) report, women are involved in doing 67% work of world; still they are socially and economically deprived.

They are receiving only 10% of the universal income and have 1% part in global assets. This discrimination also persists in their work place in unorganized sector. In informal sector, women workers don't get same wages for same nature of work for same hours done by men. They are exploited at workplace. They are some acts i.e. The Unorganized Workers Social Security Act, 2008, Domestic Workers Welfare and Social Security Act, 2010 etc. but due to their improper implementation, women workers are forced to work and live in miserable conditions in unorganized sector.

In India mostly it is women who have to do household as cook, clean the house, do the dishes, wash clothes, care of children and men do not share on most of the household works. Men do that work that is to be dealt outside the house. Now a day there is increasing need for getting some income for the family then women have to work harder. Women workers have to handle

Persecution's at their work place, sometimes just over look things to ensure that their job is not jeopardized in anyway. Many Indian families are still living as joint families along with the parents and in-laws. This adds to their stress further because they have to please all the family members of her husband. Listen to their complaints that they make against her and turn deaf ears towards them and so on. Overall, majority of women in India look towards or live in the hope that things will change. Employment Trends for Women in India.

The increase in the number of women in the labor market signifies an important trend regarding women's employment. This has been occurring alongside increases in labor force and workforce, especially for urban women, although rural women workers predominate in terms of participation rates and overall magnitude. The increasing share of women's participation in the labor force and its significant contribution to household income as well as GDP require some policy attention be paid to the gender dimensions of employment. The eleventh Five Year Plan document for the first time in the history of Indian planning recognizes women not only as equal citizens but as 'agents of sustained socio-economic growth and change' (GOI, 2008, p. 5).

A multi-pronged approach is emphasized to address issues concerning women workers, such as provision of basic entitlements and strengthening of institutional mechanisms. The increase in the growth of employment appears to be much higher for female workers compared to male workers. Even where the proportion of working women as reflected in the female work participation rate may be low, the absolute numbers have significantly increased, given the rate of population growth over time. The increase in work opportunities during the early years of the new millennium has been to the tune of 9.3 million jobs per annum (from 1999-2000 to 2004-05).

This acceleration in employment growth from 1.25 per cent per annum (1993-94 to 1999-2000) to 2.62 per cent per annum in the period 1999-2000 to 2004-05 (GOI, 2008) has been beneficial to women's participation as well. Of the 46 million job opportunities created from 1999-2000 to 2004-05 (compared to 24 million in the earlier period, i.e., 1993-94 to 1999-2000), nearly 15 million women joined the workforce. Urban areas almost doubled their number of women

workers, while in rural areas women workers increased from 9 to 12 million. Are these signs of a gradual but definite wind of change with more women entering the labour market? This positive change is noted more forcefully in the urban context where requisite educational inputs and modern thinking vis-à-vis women's work is increasingly becoming noticeable. Rural agriculture is increasingly drawing women's labour supplies, with over four-fifths of the women in rural areas working in agriculture. This gains significance amidst the declining share of male workers (from 74 per cent in 1993-94 to 66 per cent in 2004-05).

Thus it seems that women in rural areas are finding it harder to shift away from agriculture. Involvement of women in agriculture is largely as cultivators/farmers as well as agricultural laborers. However, there has been a slight decline in the share of women as agricultural laborers, while their share among cultivators has increased. In urban areas, women have achieved substantially higher growth of employment in manufacturing and have been able to increase their share, especially after 1999-2000 (from 24 per cent to over 28 per cent in 2004-05). Thus, in urban areas, the share of female workers in manufacturing has increased substantially while that of male workers has not. Even in the services sector, women have gained in terms of employment, especially in the domestic and personalservices category.

India's economy has undergone a substantial transformation since the country's independence in 1947. Agriculture now accounts for only one-third of the gross domestic product (GDP), down from 59 percent in 1950, and a wide range of modern industries and support services now exist. In spite of these changes, agriculture continues to dominate employment, employing two-thirds of all workers. India faced economic problems in the late 1980s and early 1990s that were exacerbated by the Persian Gulf Crisis. Starting in 1992, India began to implement trade liberalization measures. The economy has grown-the GDP growth rate ranged between 5 and 7 percent annually over the period and considerable progress has been made in loosening government regulations, particularly restrictions on private businesses. Different sectors of economy have different experiences about the impact of the reforms.

In a country like India, productive employment is central to poverty reduction strategy and to bring about economic equality in the society. But the results of unfettered operation of market forces are not always equitable, especially in India, where some groups are likely to be subjected to disadvantage as a result of globalization. Women constitute one such vulnerable group. Since globalization is introducing technological inputs, women are being marginalized in economic activities, men traditionally being offered new scopes of learning and training. Consequently, female workers are joining the informal sector or casual labor force more than ever before. For instance, while new rice technology has given rise to higher use of female labor, the increased work-load for women is in operations that are unrecorded, and often unpaid, since these fall within the category of home production activities.

The weaker sections, especially the women, are denied the physical care they deserve. There is, thus, hardly any ability for the majority of Indian women to do valuable functioning; the "capability" to choose from alternatives is conspicuous by absence. Most women in India work and contribute to the economy in one form or another, much of their work is not documented or accounted for in official statistics. Women plow fields and harvest crops while working on farms, women weave and make handicrafts while working in household industries, women sell food and gather wood while working in the informal sector.

Additionally, women are traditionally responsible for the daily household chores (e.g., cooking, fetching water, and looking after children). Although the cultural restrictions women face are changing, women are still not as free as men to participate in the formal economy. In the past, cultural restrictions were the primary impediments to female employment now however; the shortage of jobs throughout the country contributes to low female employment as well.

The Indian census divides workers into two categories: "main" and "marginal" workers. Main workers include people who worked for 6 months or more during the year, while marginal workers include those who worked for a shorter period. Many of these workers are agricultural laborers. Unpaid farm and family enterprise workers are supposed to be included in either the main worker or marginal worker category, as appropriate. Women account for a small proportion

of the formal Indian labor force, even though the number of female main workers has grown faster in recent years than that of their male counterparts.
