# A UNIQUE COMMON FIXED POINT THEOREM IN HILBERT SPACE FOR SELF MAPPINGS 

Mujahida Sayyed*, Farkhunda Sayyed** and Shoyeb Ali Sayyed***<br>*Assistant Professor, College of Agriculture, Jnkvv, Ganjbasoda Distt Vidisha M.P. India.<br>** Professor, SAGE University, Indore(M.P.)India<br>*** Principal, Royal College of Technology Indore(M.P.)India

#### Abstract

In this present review article, I boosted the developments of prominent educators as well as analyzers. Using I- Scheme and self mappings along with closed convex subset in Hilbert space for gathering a unique common fixed point. For getting hold of we did some tempering in old survey. Our desired result of the theorem is governing by a great number of experts.

KEY WORDS AND PHRASES : Closed Convex Subset, Functional Inequality, Hilbert Space, Ishikawa Iteration, Self Mappings, Unique Common Fixed Point

AMS(2010) SUBJECT CLASSIFICATIONS: Primary 47H10 Secondary 54H25

## 1. INTRODUCTION AND PRELIMINARY

Availing oneself of Rhoades [14,15] opinion Naimpally and Singh[8] extended it by using contraction condition , and sequel Sayyed and Badshah [17,18, 19,20] forwarded it. Again Imdad and Jawed [4]observed that the general form of his theorem remains true in metric spaces. In same pattern we gave result on nonlinear contraction with gaining a fixed point as well as Sayyed et.al.[21,22] examined it for self maps. For consequently started with Ciric [1], Das and Gupta [2], Yadav et,al [25], Veerapandi and Kumar [24],Rao et.al.[13] , Patel and Sharma [12].Nigam et.al. [9], Park [11],Dixit and Bhargav [3], Koparde and Waghmode[5,6], Modi and Gupta[7], Sharma et.al [23], Sangar andWaghmode[16] and Pandhare and Waghmode[10].

As follows to explain some of the changes made in-place:
(i) In the Ishikawa scheme $\left\{\mu_{2 \mathrm{n}}\right\}$, $\left\{\omega_{2 \mathrm{n}}\right\}$ satisfies $0 \leq \mu_{2 \mathrm{n}}, \omega_{2 \mathrm{n}} \leq 1,0 \leq \mu_{2 \mathrm{n}}, \omega_{2 \mathrm{n}} \leq 1, \forall \mathrm{n}$, $\lim \omega_{2 \mathrm{n}}=0$ as $\mathrm{n} \rightarrow \infty$ and $\sum \mu_{2 \mathrm{n}} \omega_{2 \mathrm{n}}=\infty$.

$$
\begin{equation*}
\lim _{n \rightarrow \infty} \mu_{2 \mathrm{n}}=\mu_{0}>0 \tag{ii}
\end{equation*}
$$

(iii)

$$
\lim _{n \rightarrow \infty} \omega=\omega_{0}>1
$$

Let $C^{*}$ be a non empts subset of $\mathrm{B}^{*}$, where $\mathrm{B}^{*}$ is a Banach space as well as G and $\mathrm{G}^{*}$ be two mappings in $C^{*}$ to $\mathrm{C}^{*}$ The iteration scheme, called I- Scheme, defined as follows:

$$
\begin{align*}
& \mathrm{r}_{0} \in \mathrm{C}^{*} \\
& \mathrm{~s}_{2 \mathrm{n}}=\omega_{2 \mathrm{n}} \mathrm{Gr}_{2 \mathrm{n}}+\left(1-\omega_{2 \mathrm{n}}\right) \mathrm{r}_{2 \mathrm{n}} \quad \mathrm{n} \geq 0  \tag{1.1}\\
& \mathrm{r}_{2 \mathrm{n}+1}=\left(1-\mu_{2 \mathrm{n}}\right) \mathrm{r}_{2 \mathrm{n}}+\mu_{2 \mathrm{n}} \mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}} \quad \mathrm{n} \geq 0 \\
& \mathrm{~s}_{2 \mathrm{n}+1}=\omega_{2 \mathrm{n}+1} \mathrm{Gr}_{2 \mathrm{n}+1}+\left(1-\omega_{2 \mathrm{n}+1}\right) \mathrm{r}_{2 \mathrm{n}+1} \quad \mathrm{n} \geq 0  \tag{1.2}\\
& \mathrm{r}_{2 \mathrm{n}+1}=\left(1-\mu_{2 \mathrm{n}+1}\right) \mathrm{r}_{2 \mathrm{n}+1}+\mu_{2 \mathrm{n}+1} \mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}+1} \quad \mathrm{n} \geq 0 \tag{1.3}
\end{align*}
$$

Its well known that $\mathrm{B}^{*}$ is $\mathrm{H}^{*}$ if and onls if its norms satisfies the parallelogram law, i.e. $\forall \mathrm{r}, \mathrm{s} \in B *$

$$
\begin{equation*}
\|r+s\|^{2}+\|r-s\|^{2}=2\|r\|^{2}+2\|s\|^{2} \tag{1.4}
\end{equation*}
$$

which implies, $\quad\|r+s\|^{2} \leq 2\|r\|^{2}+2\|s\|^{2}$

## 2.MAIN RESULT

THEOREM 2.1 : Taking $G$ and $G^{*}$ as two self mapping in a Hilbert space denoted by $\mathrm{H}^{*}$ with a closed convex subset abbreviated by $\mathrm{C} *$ in Hilbert space $\mathrm{H}^{*}$ also satisfying

$$
\begin{align*}
&\left\|\mathrm{Gr}-\mathrm{G}^{*} \mathrm{~s}\right\|^{2} \leq \Phi \max \left\{\|r-s\|^{2}, \frac{\|\mathrm{~s}-\mathrm{G} * \mathrm{~s}\| \|^{2}\left[1+\|\mathrm{r}-\mathrm{Gr}\|^{2}\right]}{1+\left.\|\mathrm{r}-\mathrm{s}\|\right|^{2}}, \frac{\left[1+\|\mathrm{s}-\mathrm{G} * \mathrm{~s}\| \|^{2}\right]\|\mathrm{r}-\mathrm{Gr}\|^{2}}{1+\|\mathrm{r}-\mathrm{s}\|^{2}}\right. \\
&\left.,\left[\|\mathrm{r}-\mathrm{Gr}\|^{2}+\left\|\mathrm{s}-\mathrm{G}^{*} \mathrm{~s}\right\|^{2}\right],\left[\left\|\mathrm{r}-\mathrm{G}^{*} \mathrm{~s}\right\|^{2}+\|\mathrm{s}-\mathrm{Gr}\|^{2}\right]\right\} \tag{2.1}
\end{align*}
$$

Taking $\Phi$ is arbitrary positive with $0 \leq 4 \Phi \leq 1$ and if $\exists r_{0}$ such that the I- scheme for $G$ and $G^{*}$ defined by (1.2) and (1.3), converges to a point $\mathrm{z}^{*}$, then $\mathrm{z}^{*}$ is a common point of G and $\mathrm{G}^{*}$.

## PROOF:

From equation (1.2), describe $\mathrm{r}_{2 \mathrm{n}+1}-\mathrm{r}_{2 \mathrm{n}}=\mu_{2 \mathrm{n}}\left(\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}-m_{2 \mathrm{n}}\right)$

ISSN (O): 2249-3905, ISSN(P): 2349-6525 | Impact Factor: 7.196|
Since $\mathrm{r}_{2 \mathrm{n}} \rightarrow \mathrm{u},\left\|\mathrm{r}_{2 \mathrm{n}+1}-\mathrm{r}_{2 \mathrm{n}}\right\| \rightarrow \infty$
Since $\left\{\mu_{2 n}\right\}$ is bounded away from zero, $\left\|\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}^{-}} \mathrm{r}_{2 \mathrm{n}}\right\| \rightarrow 0$ as $n \rightarrow \infty$.
It follows that $\left\|\mathrm{u}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\| \rightarrow 0$ as $n \rightarrow \infty$.
Since G and G* satisfy (2.1) we have

$$
\begin{gathered}
\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \leq \Phi \max \left\{\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{s}_{2 \mathrm{n}}\right\|^{2}, \frac{\left\|\mathrm{~s}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\left[1+\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right]}{1+\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{s}_{2 \mathrm{n}}\right\|^{2}},\right. \\
\frac{\left[1+\left\|\mathrm{s}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right]\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}}{1+\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{s}_{2 \mathrm{n}}\right\|^{2}}
\end{gathered}
$$

$$
\left.,\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+\left\|\mathrm{s}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right],\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+\left\|\mathrm{s}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right]\right\}
$$

Now, $\left\|\mathrm{s}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}=\left\|\omega_{2 \mathrm{n}} \mathrm{Gr}_{2 \mathrm{n}}+\left(1-\omega_{2 \mathrm{n}}\right) \mathrm{r}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}$
$=\left\|\omega_{2 n} G r_{2 n}+r_{2 n}-\omega_{2 n} r_{2 n}-c\right\|^{2}$
$=\left\|\omega_{2 n}\left(\operatorname{Gr}_{2 n}-r_{2 n}\right)\right\|^{2}$
$=\omega^{2}{ }_{2 n}\left\|\left(\mathrm{Gr}_{2 \mathrm{n}}+\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right)+\left(\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right)\right\|^{2}$
$\leq 2\left\|\operatorname{Gr}_{2 n}-G^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}$
and

$$
\begin{equation*}
\left\|s_{2 n}-G^{*} s_{2 n}\right\|^{2}=\left\|\omega_{2 n} G r_{2 n}+\left(1-\omega_{2 n}\right) r_{2 n}-G^{*} s_{2 n}\right\|^{2} \tag{2.3}
\end{equation*}
$$

$$
=\left\|\omega_{2 n}{G r_{2 n}}+\left(1-\omega_{2 n}\right) r_{2 n}-G^{*} s_{2 n}+\omega_{2 n} G^{*} s_{2 n}-\omega s_{2 n} G^{*} s_{2 n}\right\|^{2}
$$

$$
=\left\|\omega_{2 n}\left(\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right)+\left(1-\omega_{2 \mathrm{n}}\right)\left(\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right)\right\|^{2}
$$

$$
\leq 2 \omega^{2}{ }_{2 n}\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left(1-\omega_{2 \mathrm{n}}\right)^{2}\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}
$$

$$
\begin{equation*}
\leq 2\left\|\mathrm{Gr}_{2 n}-G^{*} \mathrm{~s}_{2 n}\right\|^{2}+2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \tag{2.4}
\end{equation*}
$$

from (2.2), (2.3) , (2.4) can be written as:

Or

Or

$$
\begin{aligned}
& \left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \leq \Phi \max \left[2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}\right],\left[2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right. \\
& \left.+2\left\|r_{2 n}-G * s_{2 n}\right\|^{2}\right] \\
& ,\left[2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right],\left[4\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+4\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right] \\
& \text {, }\left[3\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right]
\end{aligned}
$$

$$
\begin{aligned}
& , \frac{\left[2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right]\left[1+2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right]}{1+2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}} \\
& , \frac{\left[1+2\left\|G r_{2 n}-G * s_{2 n}\right\|^{2}+2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right]\left[2\left\|r_{2 n}-G * s_{2 n}\right\|^{2}+2\left\|G * s_{2 n}-G r_{2 n}\right\|^{2}\right)}{1+2\left\|G r_{2 \mathrm{n}}-\mathrm{G} * \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{G} * s_{2 \mathrm{n}}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}} \\
& ,\left[2\left\|r_{2 n}-G^{*} s_{2 n}\right\|^{2}+2\left\|G * s_{2 n}-G r_{2 n}\right\|^{2}+2\left\|\operatorname{Gr}_{2 n}-G^{*} s_{2 n}\right\|^{2}+2\left\|r_{2 n}-G^{*} s_{2 n}\right\|^{2}\right] \\
& \left.,\left[\left\|r_{2 n}-G^{*} s_{2 n}\right\|^{2}+2\left\|\operatorname{Gr}_{2 n}-G^{*} s_{2 n}\right\|^{2}+2\left\|r_{2 n}-G^{*} s_{2 n}\right\|^{2}\right]\right\}
\end{aligned}
$$

$\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \leq \Phi\left(2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}\right.$
Or
$(1-2 \Phi)\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \leq 2 \Phi\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}$
Or
$\left\|\operatorname{Gr}_{2 n}-G^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2} \leq \frac{2 \Phi}{1-2 \Phi}\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{~s}_{2 \mathrm{n}}\right\|^{2}$
Taking the $\lim$ as $\mathrm{n} \rightarrow \infty$, we get $\left\|G r_{2 n}-G * s_{2 n}\right\|^{2} \rightarrow 0$. It follows that
$\left\|r_{2 n}-G r_{2 n}\right\|^{2} \leq\left\|r_{2 n}-G * s_{2 n}\right\|^{2}+2\left\|G * s_{2 n}-G r_{2 n}\right\|^{2} \rightarrow 0$
and,
$\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2} \leq 2\left\|\mathrm{z}-\mathrm{r}_{2 \mathrm{n}}\right\|^{2}+2\left\|r_{2 n}-G * s_{2 n}\right\|^{2} \rightarrow 0$ as $\rightarrow \infty$.
If $\mathrm{r}_{2 n}$ and z satisfy (2.1) we have

```
\(\left\|\operatorname{Gr}_{2 n}-G^{*} z\right\|^{2} \leq \Phi \max \left\{\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2},\left\|\mathrm{z}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\left[1+\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right] / 1+\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2}\right.\right.\)
    ,\(\left[1+\left\|\mathrm{z}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\right]\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2} / 1+\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2}\right.\)
    \(\left.,\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+\left\|\mathrm{z}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\right],\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}+\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right]\right\}\)
\(\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2} \leq \Phi \max \left\{\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2},\left[2\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\right]\left[1+\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right] / 1+\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2}\right.\right.\)
, \(\left[1+2\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\right]\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2} / 1+\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{z}\right\|^{2}\right.\)
\(\left.,\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+2\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}\right],\left[\left\|\mathrm{r}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}+\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}\right]\right\}\)
```

Taking the $\lim$ as $n \rightarrow \infty$, we obtain
$\left|\left|G r_{2 n}-G * z\left\|\left.\right|^{2} \leq 2 \Phi| | G r_{2 n}-G * z\right\|\right|^{2}\right.$
$(1-2 \Phi)\left|\left|G r_{2 n}-G * z\right| \|^{2} \leq 0\right.$.
that is, $\left\|G r_{2 n}-G * Z\right\|^{2} \rightarrow 0$
Finally $\left\|\mathrm{z}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}=\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}+\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2}$
$\leq 2\left\|\mathrm{z}-\mathrm{Gr}_{2 \mathrm{n}}\right\|^{2}+\left\|\mathrm{Gr}_{2 \mathrm{n}}-\mathrm{G}^{*} \mathrm{z}\right\|^{2} \rightarrow 0$ as $\mathrm{n} \rightarrow \infty$,
For that $\mathrm{z}=\mathrm{G}^{*} \mathrm{z}$
Proceeding in the same, $\mathrm{z}=\mathrm{Gz}$.
Clearly by definition $G$ and $G^{*}$ have a common fixed point z .
This complete the proof of theorem.
Assuming $G=G^{*}=Z^{*}$ in previous theorem, we obtain the following corollary :
COROLLARY 2.1: Let $\mathrm{H}^{*}$ be a Hilbert space, $\mathrm{C}^{*}$ be a closed convex subset of $\mathrm{H}^{*}$ and $\mathrm{Z}^{*}$ be a self mapping in $\mathrm{H}^{*}$ into itself satisfying condition 2.1. Taking $\Phi$ is arbitrary positive with $0 \leq$ $4 \Phi \leq 1$

If there exists a point $r_{0}$ such that the I-scheme for $Z^{*}$ defined by
$\mathrm{s}_{\mathrm{n}}=\omega_{\mathrm{n}} \mathrm{Z}_{\mathrm{rn}}+\left(1-\omega_{\mathrm{n}}\right) \mathrm{r}_{\mathrm{n}}, \mathrm{n} \geq 0$
$\mathrm{r}_{\mathrm{n}+1}=\left(1-\mu_{\mathrm{n}}\right) \mathrm{r}_{\mathrm{n}}+\mu_{\mathrm{n}} \mathrm{Z}_{\mathrm{sn}}, \mathrm{n} \geq 0$
converges to a point $p$, then $p$ is the fixed point of $Z^{*}$.

In the I- scheme , $\left\{\mu_{\mathrm{n}}\right\},\left\{\omega_{\mathrm{n}}\right\}$ satisfy $0 \leq \mu_{\mathrm{n}} \leq \omega_{\mathrm{n}} \leq 1$ for all n .
$\lim _{n \rightarrow \infty} \omega_{\mathrm{n} .} \sum \omega_{n} \mu_{n}=0$ Assuming that
(i) $0 \leq \omega_{n}, \mu_{n} \leq 1$, for all n .
(ii) $\lim \omega_{\mathrm{n}}=\omega>0$,
(iii) $\lim \mu_{\mathrm{n}}=\mu>1$.

The proof is similar to above Theorem, Hence we omit the details.

CONFLICT OF INTEREST . There is no conflict of interest.
